

## Diamond Knowledge Base

### Centurion Version History 1.40

Build #0001 03/17/15	Adds New "Live Counter Monitoring System" and also includes initial support for the Omega X3 traffic counter.
Build #0002 04/01/15	Modified the Loop Class Analysis table and fixed several total count issues found. Changed the loop class generator to default to class 2 when all zero's have been found in the 64 bit ID and Loop Class Values. Changed the Loop Class table generator to accept all zero codes as valid and will generate percentage based loop class values for that data.
Build #0003 04/02/15	Added radar text file import functionality.
Build #0004 04/13/15	Changed the LCM function to combine the ADate and ATime value as a new single "EpochTime" value which is the Unix Epoch time.
Build #0005 05/10/15	Changed the Terminal window to have a saved position and size. Modified the Omega X3 firmware update function to support 6 digit address values
Build #0006 05/20/15	Made various changes for Omega X3 connection.
Build #0007 06/12/15	More changes for Omega X3.
