Diamond Knowledge Base

Centurion Version History 1.07

Build #0001 03/14/03	General: Complete change over to use C++ Builder V6 with change of all associated libraries and components. Fixed various color errors on windows & menus (XP vs older Windows Issue). Changed registration to use "diamondtraffic.com" instead of "www.diamondtraffic.com". Various Database View improvements. Minor corrections to the Scan function to improve stability. Reports – New Addition: Added new classification report: Special Speed Study. Added new classification report: Column Speed Study. Added new classification report: Basic Class Report (5 reports in one). Other Report Changes: Changed to use new Gnostic Export functions. This improves the look, features, and quality of the saved report (see Report Saving information in this guide). All Report headers changed to standard. Various report improvements and changes to improve the stability of the report generator.
Build #0002	Fixed a problem displaying "Handle Not Valid" when exiting the program while still scanning for a counter. Fixed some issues related to the help system.
