Diamond Knowledge Base

Centurion Version History 1.10

| Build #0001 06/24/03 | Major update adding many new features and fixing various bugs: DB Editor: Fixed position of buttons and other related problems. Fixed panel problems in the DB Data editor (Zoom In/Out). Fixed Database Search/Locate problems. Fixed the "Reimport" function. Made miscellaneous other basic improvements to editor. Eliminated the "NetFileDir" and "PrivDir" settings.

 Reports: Major addition of the Graphs and Charts to most reports. Added user settable "Organization" to the Preferences menu. This allows users to enter a custom one or two line message at the bottom of all reports. Added major new Chart Editor Function allowing the user to edit and customize any chart, save new values as default or custom char definitions. This allows the user to create virtually any kind of chart for any kind of data. New sub-directory under "Reports" is created named "ChartDef" which holds the chart definition data. Fixed Class Names on Basic Class Report. Eliminated "Directory is Busy" error when opening multiple reports. Fixed problem with Stop Time not being forced to whole intervals. Fixed problem with Hourly-Multi Channel not printing last day sum. Added a Landscape/Portrait toggle to the Report Generator. Made major speed improvement to Report generator (reports held in memory instead of being deleted & re-created each time). Made sure correct help window appears from the Report Generator. Other: Updated Quick Report Export to V3.01 and TMS to 06/07/03 component libraries. Fixed problem with spill over vehicle (23:59:59) appearing at the start of a day causing some problems with the import. Fixed problem in Direct to Excel not Exporting just the lanes specified in Raw & Binned modes. Fixed a variety of Bin Table Editor problems. |
| Build #0002 07/22/03 | Fixed problem with downloading multiple high-speed files from a Unicorn-Limited. Importing: Fixed problem with error message when second error is added to already showing Error List window. Changed the Error List window to modeless (from modal). Fixed problem handling last file in RAM of a Unicorn-Limited which has a full flash memory. Fixed problem with import when a time stamped vehicle crosses into a new day at the beginning of a file (HLE's bug report for site 61986). Added warning/wait window when closing and importing is currently active. Fixed problem with Hourly Multi Channel with high lane count. |
